How To Make CBD Oil At Home With CBD Isolate Powder

Step by Step Instructions

STEP 1) The Products, Ingredients and Tools You'll Need

Buy The Following From CBD From The Gods:

- ASTRAEA, HEMP CBD ISOLATE POWDER (1 gm min)
- Special Spoon (aka, "DAB Tool" / comes with purchase)
- Empty Tincture Bottle (add on to your order)

Other Ingredients You'll Need

- MCT Oil **(Nutiva's Organic MCT Oil Recommended)**
  - **NOTE**: You can purchase the MCT oil of your choosing from your local grocer or health food store. We recommend **Nutiva's Organics MCT Oil**, sold over the counter where available and **online**.
- ADDING FLAVOR IS OPTIONAL

STEP 2) Place ISOLATE Powder In MCT Oil

- Pour 1 oz of MCT oil in a small cup (any simple cup will do)
- Add 1 gm of ASTRAEA CBD ISOLATE to 1 oz MCT oil
- Stir gently

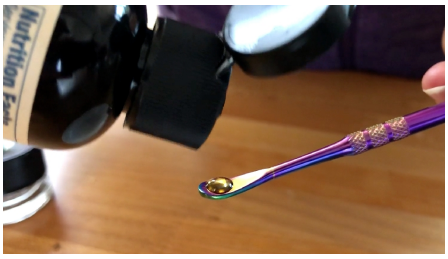

STEP 3) Place Your Cup In Warm Water

- Boil a few cups of water and pour the water into a separate bowl
- Cool the boiling water by adding a little cold water to the bowl so that the water in the bowl is warm to the touch. You do **not** want it boiling hot.
- Place your cup of isolate/MCT oil mix into the bowl of warm water as shown in the image above.
- Let sit in the warm water or 3 to 5 minutes
- Stir the mix occasionally if need to completely dissolve the ISOLATE into the MCT Oil

STEP 4) Adding Flavor Is Optional

- If you add flavor, use an all natural substance that dissolves easily in liquids that will not congeal.
- Stevia works great for this, and it comes in many different flavors.
- **IMPORTANT NOTE** - start by adding small amounts as shown in the second slide/image above. You can always add more, but you cannot take it away once it's in the mix.
    - **ONE DROP OF STEVIA IS POTENT**
- Simply stir it into your cup as shown in slide/image 3 above.

STEP 5) IT'S READY: Add Your Mix To The Bottle

- Pour the contents of your cup into the your tincture bottle to complete the process
- Your homemade **Astraea, Hemp CBD Isolate Oil** is ready to consume. Enjoy!
